# Tesla: Master of Lightning

Thursday, May 26, 2016, 7:00PM

(87 min) USA

Director/Writer: Robert Uth Producers: Simonida and Robert Uth

Nikola Tesla was one of the greatest inventors of the 20th century, with hundreds of patents worldwide. He was a visionary genius whose radical ideas created the technology that connects the world with power and information. One of history's most controversial and misunderstood people, his incredible story has finally been brought to the screen. *Tesla, Master of Lightning*, is a multi-media project that tells the comprehensive story of the life and work of Nikola Tesla for the very first time. The film features many new and unknown details of Tesla's life, including the influence he had on the Strategic Defense Initiative missile defense program.

A great deal of the story is told in Tesla's own words, drawn from his autobiographical and scientific writings and performed by Stacy Keach.

*Following the screening, there will be a discussion with the filmmakers Simonida and Robert Uth moderated by Jasmina Bojic, Camera As Witness Program Director and Founder of the international documentary film festival UNAFF*
